

Genesis Rehearsal: Actual Start Guide

Print this version. It is based on a read-only check of the saved rehearsal record on 2026-09-17, not on the earlier proposed checklist.

Your actual starting point

Item	Verified state now
Tournament	Genesis Rehearsal - Open; registration is open
Active events	4: Main Event; Consolation Event; Satellite Event -C.D. (Canadian Doubles); Canadian Doubles Practice (Canadian Doubles)
Roster	6 active people; 1 withdrawn duplicate Daron record is preserved and should stay withdrawn
Not started	No payments, event check-ins, enrollments, seats, schedules, or linked player accounts
Retired event	Satellite Event - Paper team Doubles is retired. Do not use it.

Do this first - do not close registration yet

There is a real blocking defect in the current roster screen: Gabe, Maryn, and Shonni have no saved ACC number. Ian's saved **HI297Y** is a valid youth ACC number. The new event QR check-in correctly requires an ACC number and exact roster match, but the current roster screen has no safe way to edit a saved ACC number. Do not remove or re-add anyone: the duplicate guard will stop that and it risks more confusion.

- [] Open **Players and Registration**. Confirm the active list contains Daron, Gabe, Maryn, Shonni, Luke, and Ian exactly once.
- [] Leave the withdrawn Manual Daron record alone. The active Registration Daron record is the correct one.
- [] Use the Scorecard Type controls only to confirm: Daron/Gabe/Maryn = Digital; Ian/Shonni/Luke = Paper.
- [] Stop before closing registration. ACC-number correction must be available before Gabe, Maryn, and Shonni can use event QR check-in. Ian's saved youth number HI297Y is already valid.

This is not an error you caused. I found it by checking the stored rehearsal state. This guide deliberately does not tell you to work around it by deleting people or using the retired event.

Once roster ACC corrections are available: click-by-click rehearsal sequence

1. Prepare the six-person roster

- [] In **Players and Registration**, give Gabe, Maryn, and Shonni unique rehearsal ACC numbers in uppercase state-number form. Adult example: **HI9001**; youth example: **HI9001Y**. Keep Ian's valid HI297Y unless you intentionally test a correction. Record each number on this checklist.
- [] Confirm each person has First name, Last name, Email, ACC #, and the requested Scorecard Type. Do not use a shared app account.
- [] Only after the roster is accurate, use **Manual payment evidence / Financials** to enter test cash/check obligations and receipts. Include one partial payment, a correction or void, and a replacement receipt.

2. Prepare player accounts and officials

- [] Current build: open **Player account activation**. For each Digital scorer, select **Create Private Link**, give that link to the named person, and have them open it on their assigned device.
- [] The current build still uses an in-person witnessed approval after the player opens that private link. A second director/co-director must enter the displayed witness phrase. This is current app behavior; it is not the automated email delivery you asked for.
- [] After Gabe and Shonni have linked accounts, open **Cross-checker assignments**. Check the confirmation box beside each and select **Assign as Cross-checker**. Do not assign Daron or the co-director as a cross-checker.

3. Close ordinary registration and publish seating

- [] Return to the tournament workspace. Use **Close registration** only after all six roster records, payment test entries, and required account links are correct.
- [] Open **Check-in and seating**. Enter the intended rehearsal table layout: 3 tables and 4 seats per table. Publish seating only after the capacity and roster list look right.
- [] On every device, open **Seating Directory**. Confirm each person can see their own starting Table/Seat and Verification ID. Test search by name and ACC #. Print the paper-card preparation list for Ian, Shonni, and Luke.

Play-day order - do not skip steps

4. Event enrollment and start

- [] Open **Event participants**. Enroll the six people in Main Event. Add only eligible people to the Canadian Doubles satellites when teams are created. Consolation stays unavailable until Main non-qualifiers are known.
- [] Open **Game schedule**. Create or import the rehearsed games, check for duplicate opponents/capacity conflicts, then publish the schedule.
- [] Use **Start Play** for Main Event only after registration is closed, attendance/seating/enrollment/schedule are complete. Starting Main does not start either Satellite or Consolation.

5. Day-of-play QR check-in test

- [] Open **Day-of-play Event QR Check-In** for the Main Event on an iPad/laptop display. The QR changes every 60 seconds.
- [] A player scans while the QR is current. The phone immediately receives a private 5-minute form. The player enters First name, Last name, Email, and ACC #. The QR itself disappears from the browser address.
- [] Test the 1-minute and 30-second warnings. At expiry, the player must scan the current display QR again.
- [] For this rehearsal, test one paid/enrolled exact match and one unpaid/unknown path. The latter must say to visit the desk; it must not reveal payment or roster information.

6. Score and verify

- [] Run one Digital/Digital Singles game, one Digital/Paper game, and one Paper/Paper game. Do not treat a first entry as verified.
- [] Create one deliberate mismatch, confirm that a scorer cannot confirm their own entry, then use the audited correction and independent cross-check steps.
- [] Run the Canadian Doubles Digital/Digital, Digital/Paper, and Paper/Paper practice cases. Start each Satellite separately before entering its score.

7. Finish in this order

- [] Complete Main results and check Live Preliminary Standings. Verify qualifiers, High Non-Qualifier, and Main MRP output.
- [] Populate, schedule, start, and complete Consolation; verify Consolation MRP output.
- [] Complete both Satellite result/payout tests. Satellites must display MRP: Not applicable.
- [] Complete Side Pool elections, receipts, void/correction, payout, reconciliation, CSV, and PDF. Do not clear device data until all offline queues are empty and server acknowledgements are complete.

What to report back if something fails

Send one screenshot showing the page title, the exact message, and the address bar. Also tell me which numbered step above you were on. Do not repeatedly press a retry/finalize button, withdraw a roster record, or create a duplicate tournament as a workaround.
